KEY MANAGER

Overview

Leosac Key Manager (LKM) is a software solution for managing and generating secret cryptographic keys. It supports different key store technologies used by the access control and identification industry.
Through a modern, user-friendly interface, the software provides a consistent way to work with these technologies, making it easy to switch between them and interconnect key stores (Master/ Slave SAMs, publishing keys from an HSM to SAMs, etc.).

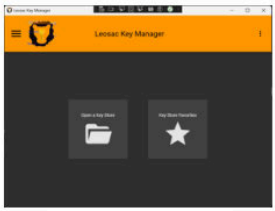

Key Generation

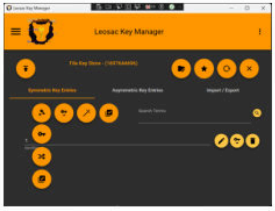

- Random
- Password derivation
- Mnemonic
- Key ceremony (XOR / concatenation / Shamir)

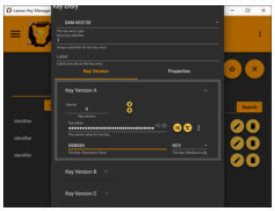

Key Stores

- Local file
- NXP SAM AV2 / AV3
- HSM PKCS #11
- Leosac Credential Provisioning Server
- ISLOG SAM Manager template (read-only)
- Synchronic - NXP SAM SE
- KeePass
- TPM / CryptoAPI
